

# Building Your First Recommendation Algorithm

Devfest 2024

# Goals & Guiding Questions

**Let's design an algorithm that can give good movie recommendations!**

**Let's apply what we learned today to make cool things for the hackathon!**

# Goals & Guiding Questions

**1. What makes a program intelligent?**

**2. How can we represent movie data?**

**3. How can we define movie similarity?**

**4. How can we define “good” recommendations?**

**5. How can we implement this in code?**

**6. How can I use this for the hackathon?**

# 1. What makes a program “intelligent”?

**Adaptability**

**Learning Context**

## 2. How can we represent movie data?

### Barking Dogs Never Bite

Original title: Flandersui gae  
2000 · Not Rated · 1h 50m

IMDb Rating: ★ 6.9/10  
10K

YOUR RATING: ☆ Rate

2 VIDEOS

24 PHOTOS

Comedy

An idle part-time college lecturer is annoyed by the yapping sound of a nearby dog. He decides to take drastic action.

**Director** Bong Joon Ho

**Writers** Song Ji-ho · Bong Joon Ho · Derek Son Tae-woong

**Stars** Bae Doona · Lee Sung-jae · Kim Ho-jung

## 2. How can we represent movie data?

### MOVIE INFO

Frustrated with loud barking, an academic (Lee Sung-jae) wages war against dogs in his apartment building.

Content collapsed.

**Genre:** Comedy

**Original Language:** Korean

**Director:** Bong Joon Ho

**Writer:** Bong Joon Ho, Tae-woong Derek Son, Song Ji-ho

**Release Date (Streaming):** Nov 1, 2011

**Runtime:** 1h 48m

**Production Co:** CJ Entertainment, Uno Films, Cinema Service

## **2. How can we represent movie data?**

**Is the data a good representation of the actual object?**

**Is the data easily storable and perform functions on?**

## 2. How can we represent movie data?

Use the entire script

Take the plot summary

Set of keywords

Overlapping actors / directors

Genre metrics

## 2. How can we represent movie data?

**Comedy: 9.53**

**Romance: 1.01**

**Action: 1.22**

**Thriller: 2.33**

**[9.53, 1.01, 1.22, 2.33 ... 0.87, 8.09]**

**...**

**Mystery: 0.87**

**Suspense: 8.09**

### **3. How can we define movie similarity?**

**In other words, how should we  
measure the distance between two  
points in space?**

### 3. How can we define movie similarity?

#### Euclidean Distance

#### Manhattan Distance

## 4. How can we define good recommendations?

**Good recommendation  
=  
Closest movie?**

# 5. How can we implement this in code?

**Movies I've liked:**

[[0.11, 7.32 ... 3.46],  
[2.37, 9.11 ... 3.32],  
...  
[9.88, 0.12 ... 3.45]]

**Our recommendation  
algorithm**

**Recommended movie**

## 5. How can we implement this in code?

## 5. How can we implement this in code?

`closest_distance = infinity`

`recommendation = None`

`for movie M in all_movies:`

`current_distance = 0`

`for movie L in liked_movies:`

`current_distance += Euclidean(M, L)`

`if current_distance < closest_distance:`

`recommendation = M`

`return recommendation`

## **5. How can I use this for the hackathon?**

- 1. Make a recommendation algorithm (with improvements!)**
- 2. Dig deeper and explore other applications of AI / ML**
- 3. Come talk to us with your ideas!**
- 4. \*\*\* Come hack on Saturday!!**
